(54) Title: REWINDING MACHINE WITH GLUING DEVICE TO GLUE THE FINAL EDGE OF THE LOG FORMED AND RELATIVE WINDING METHOD

(57) Abstract: The rewinding machine comprises: winding elements (1, 3, 5) to wind the web material (N) and form the logs (L1, L2); at least a first glue dispenser (31B) to apply a first glue (C2) to a portion of said web material, in proximity to a severing line, along which the web material is severed upon termination of winding a log. The first glue dispenser comprises a mechanical element (31B) that touches the web material (N) upon termination of winding each log (L1, L2), to transfer the first glue to the web material (N).
